Art Unit: 2837

UNITED STATES DEPARTMENT OF COMMERCE  
Patent and Trademark Office  
ASSISTANT SECRETARY AND COMMISSIONER OF PATENTS AND  
TRADEMARKS  
Washington, D.C. 20231

Paper No:01082004  
Serial Number: 09/863811  
Filing Date: May 22,2001

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1- 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oglesbee et al (6600641).

1,12) Oglesbee et al teaches in figures 1-5, an overcurrent protection device.

A parallel protection element 101 is in parallel with an electronic circuit (battery charger).

A bi-directional cut-off element 102 is in series with the element 101 and is normally on.

Art Unit: 2837

A temperature detection element 104,106 adjacent the parallel element 101.

A switching element 103 operates based on temperature detection of 104,106.

Oglesbee et al does not teach a telephone line/equipment.

Intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

2) Switching circuit 103 can be pass transistor 504.

3-7,13) Back to back thyristors are considered an equivalent to bi-directional transistor.

8,10) Col. 4, lines 61-67 state the costs associated with a silicon integrated circuit.

9) 104,106 detects temperature of 101. Referred in art as "thermal crowbar".

11) Figure 2 illustrates threshold values.

3. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

The newly cited art illustrates the placement of a temperature sensor placed adjacent the parallel protection element which further operates a series disconnect element.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2837

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Thomas et al illustrate a similar thermal crowbar using additional elements besides transistors.

Duffy et al., Bacon et al and Oglesbee et al show transistors.

A shortened statutory period for response to this action is set to expire 3 months from the date of this letter.

Failure to respond within the period for response will cause the application to become abandoned. 35 U.S.C. 133
